

STRAIN GAUGE INSTALLATION

Spot Weldable

APPLICATIONS

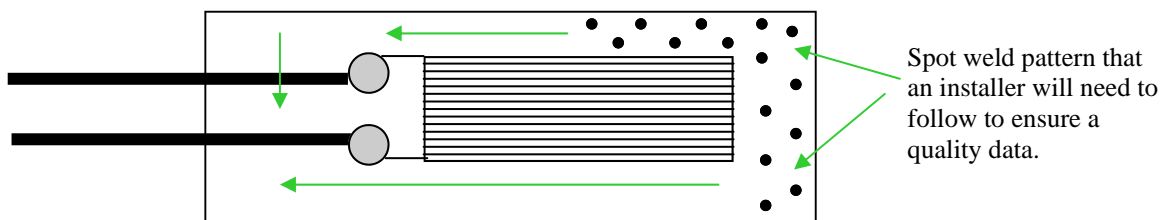

- Covers virtually all industries that operate in temperature ranging of -20 to 1000 DegC.
- FEA correlation predictive analysis.
- Static and dynamic measurements.

Spot Weldable strain gauges come in many shapes and sizes and the application will determine which design will provide the best data.

The strain gauge can be installed by customers with little knowledge of how to install strain gauges. There are some basis rules that will need to be adhered to ensure a quality and reliable installation.

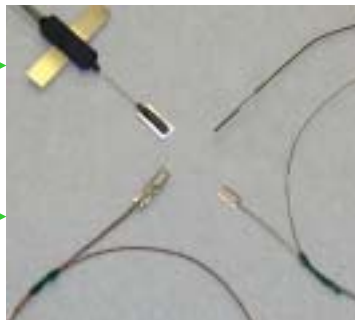

PCM can also hire the special micro spot welders to install the strain gauges.

Due to the vast range of designs on offer, please contact our sales office with information / details of your project and by return a quotation and specification will be supplied.

General purpose fully waterproof sealing.

Flame spray design with a cable carrier.

Full encapsulated module for high temperature applications.

Flame spray design.
